Import Data using Transform Maps (Spreadsheet)

Description:

This micro project demonstrates the import and transformation of structured employee data in the **ServiceNow** platform using **Import Sets and Transform Maps**. The project simulates a real-world data migration scenario in which employee information maintained in an external Excel spreadsheet is transferred into ServiceNow.

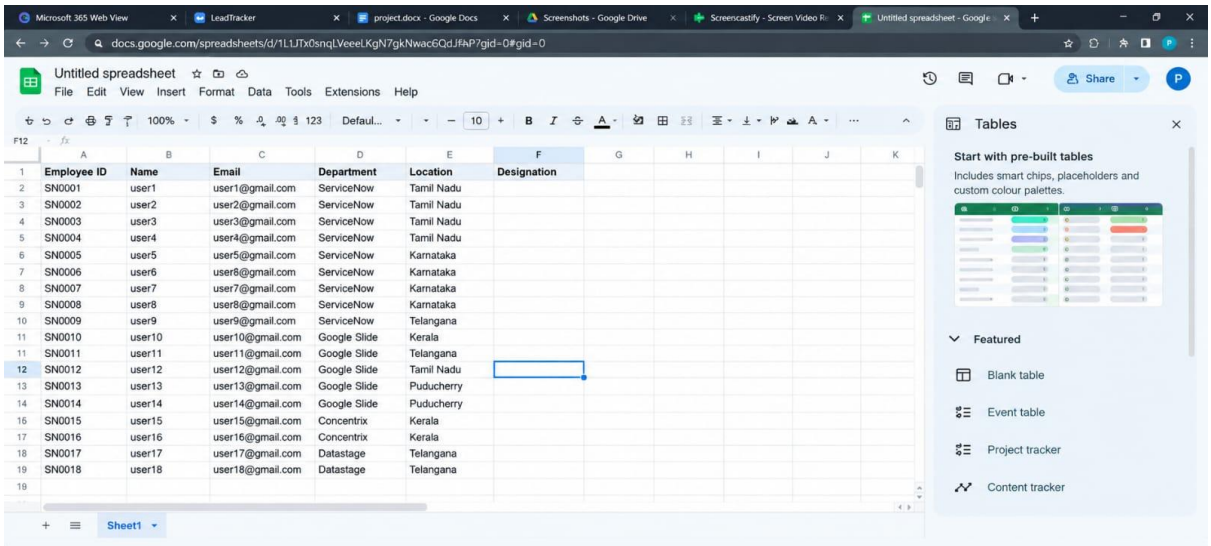

The employee dataset is loaded into an **Import Set table**, which acts as a temporary staging area for the imported data. A **Transform Map** is configured to establish the required field mappings between the source data and the appropriate target table fields. The transformation is then executed to create employee records in the target table, followed by verification of the imported records to ensure accuracy and consistency.

The project provides practical exposure to ServiceNow's data import and transformation capabilities, including data loading, field mapping, transformation execution, and record validation. It demonstrates how structured external data can be efficiently migrated into ServiceNow while maintaining data accuracy and integrity.

Step by Step process:

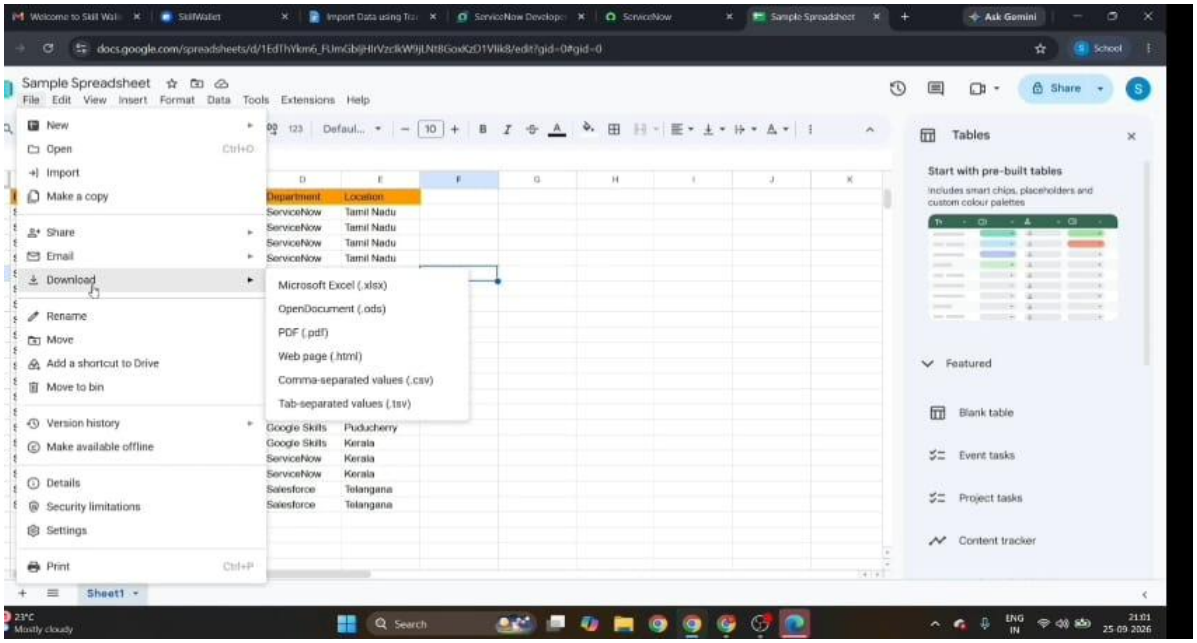

Phase 1: Prepare the sheets

1. Open New Google Spreadsheet
2. Create New Google Spreadsheet with sample data as shown below

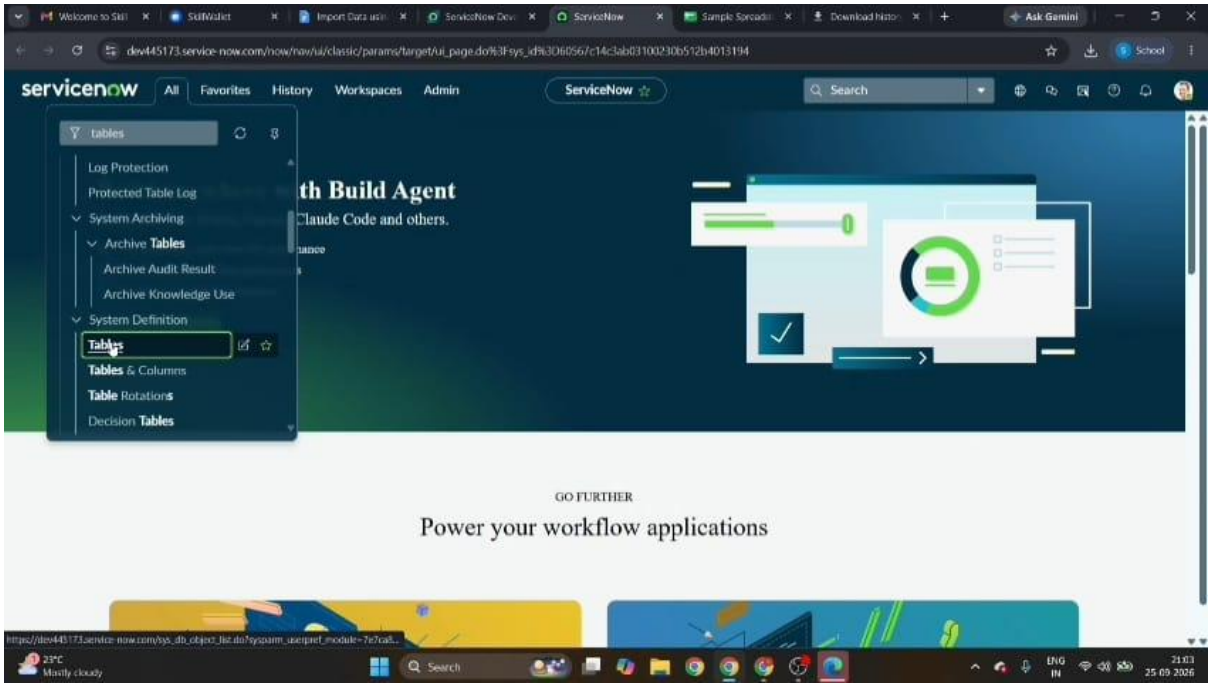

Employee ID	Name	Email	Department	Location	Designation
SN0001	user1	user1@gmail.com	ServiceNow	Tamil Nadu	
SN0002	user2	user2@gmail.com	ServiceNow	Tamil Nadu	
SN0003	user3	user3@gmail.com	ServiceNow	Tamil Nadu	
SN0004	user4	user4@gmail.com	ServiceNow	Tamil Nadu	
SN0005	user5	user5@gmail.com	ServiceNow	Karnataka	
SN0006	user6	user8@gmail.com	ServiceNow	Karnataka	
SN0007	user7	user7@gmail.com	ServiceNow	Karnataka	
SN0008	user8	user8@gmail.com	ServiceNow	Karnataka	
SN0009	user9	user9@gmail.com	ServiceNow	Telangana	
SN0010	user10	user10@gmail.com	Google Slide	Kerala	
SN0011	user11	user11@gmail.com	Google Slide	Telangana	
SN0012	user12	user12@gmail.com	Google Slide	Tamil Nadu	
SN0013	user13	user13@gmail.com	Google Slide	Puducherry	
SN0014	user14	user14@gmail.com	Google Slide	Puducherry	
SN0015	user15	user15@gmail.com	Concentrix	Kerala	
SN0016	user16	user16@gmail.com	Concentrix	Kerala	
SN0017	user17	user17@gmail.com	Datastage	Telangana	
SN0018	user18	user18@gmail.com	Datastage	Telangana	

3. Download the spreadsheet as Sample Spreadsheet.xlsx format.

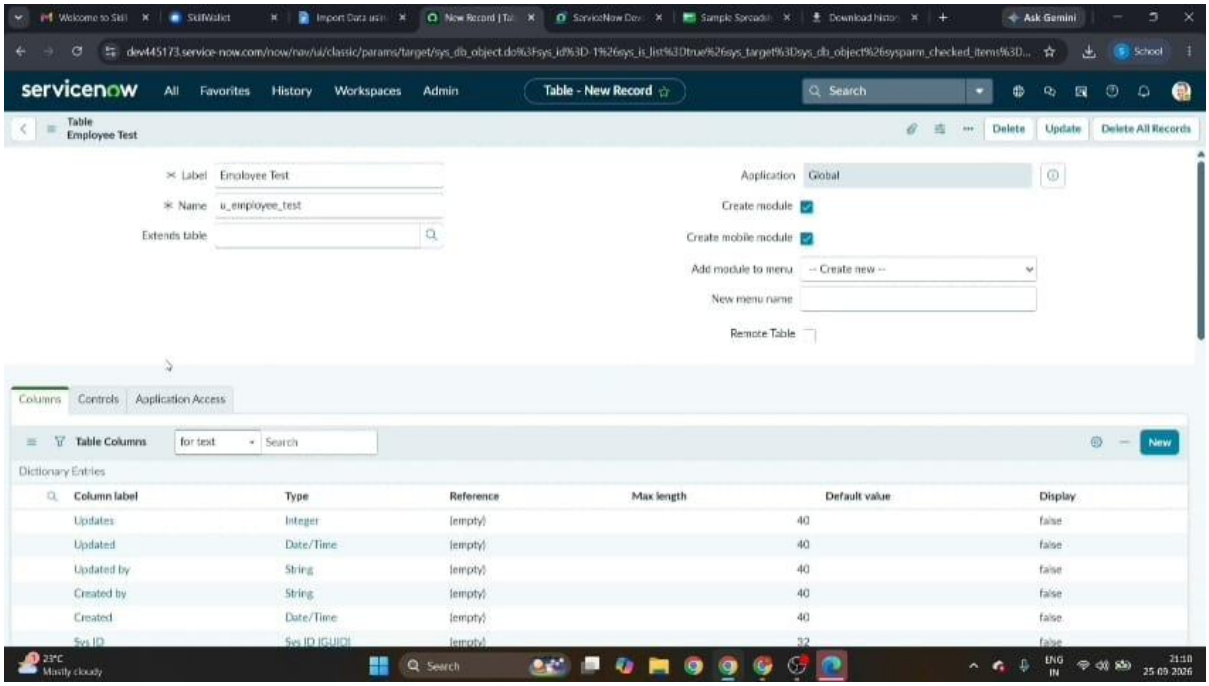

Phase 2: Create new Custom table

Navigation:

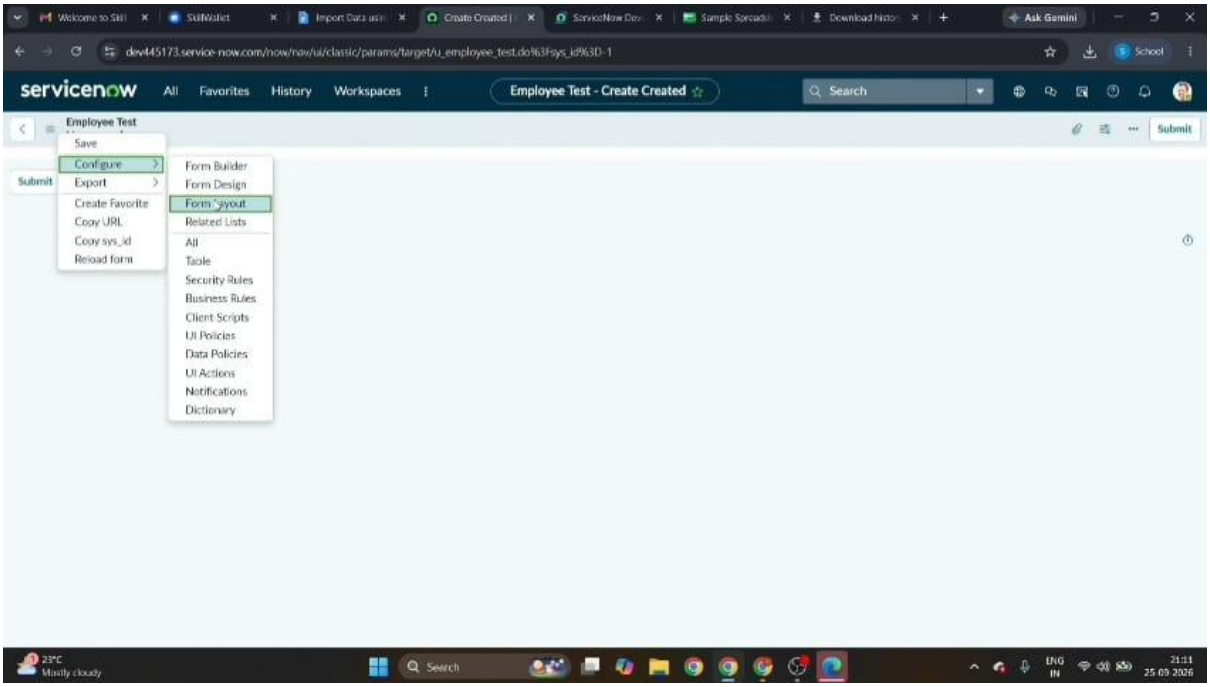

- Tables > Create New
- Label: Employee Test

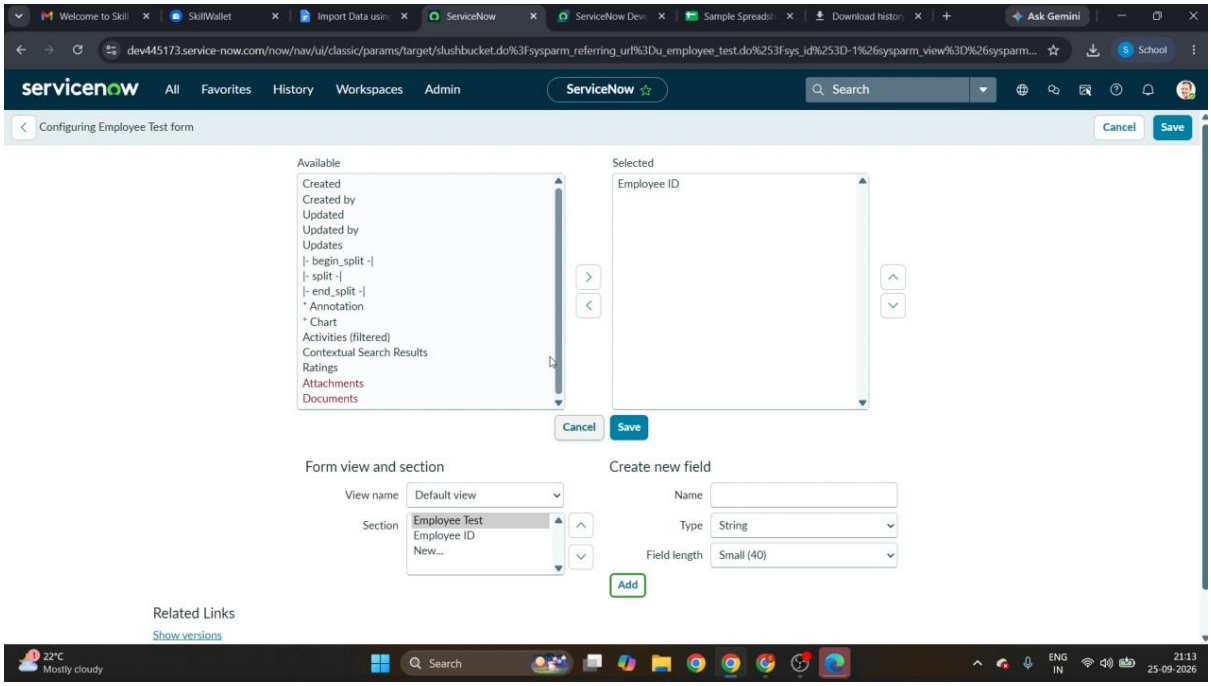

- Name: u_employee_test
- After creating and saving the **Employee Test** table, **scroll down** to the bottom of the table form.

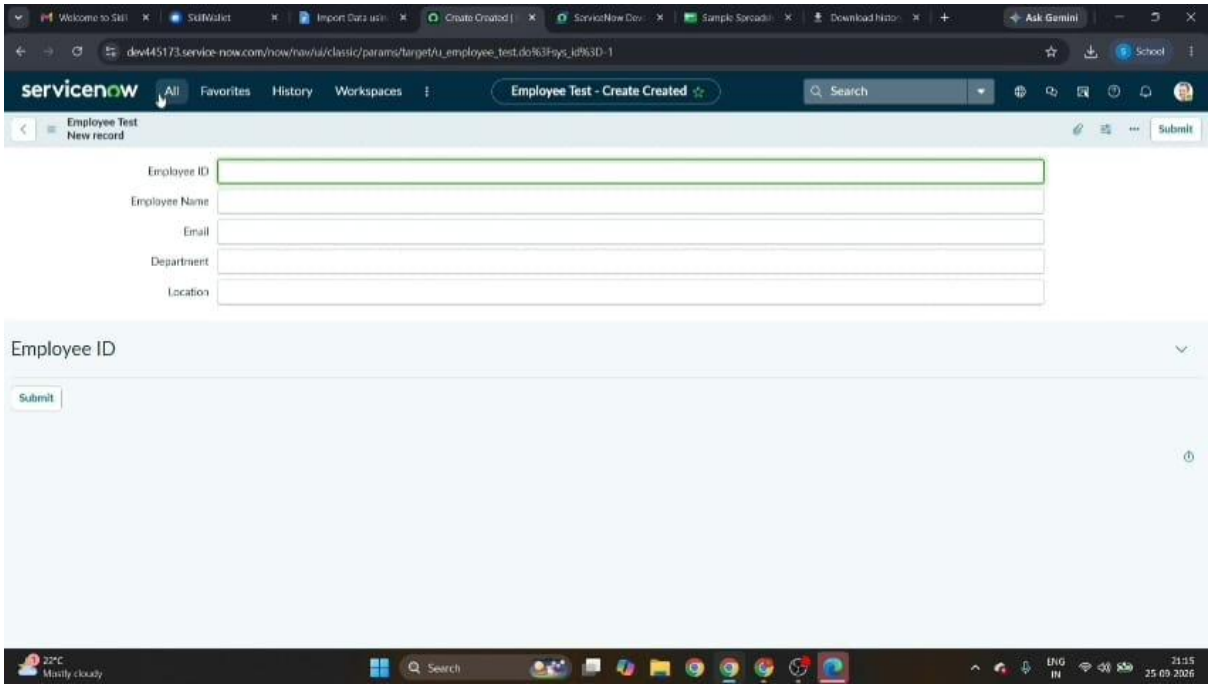

- Click **Show Form** to open the table form.
- On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.
- Click the **Form Context Menu / Additional Actions** icon.
- Click configure, select **Form Layout**

- The **Form Layout** page will open, where you can configure the fields displayed on the form
- After opening **Form Layout**, click **New** to create a new field.
- Enter the field details:
- **Column Label:** Employee ID
- **Type:** String
- Click **Add** to create the field.

- Repeat the same steps to create the following fields:
  - **Employee Name** – Type: String
  - **Email** – Type: String
  - **Department** – Type: String
  - **Location** – Type: String
- After creating all the required fields, click **Save**.
- Verify that the newly created fields are displayed on the **Employee Test** form.

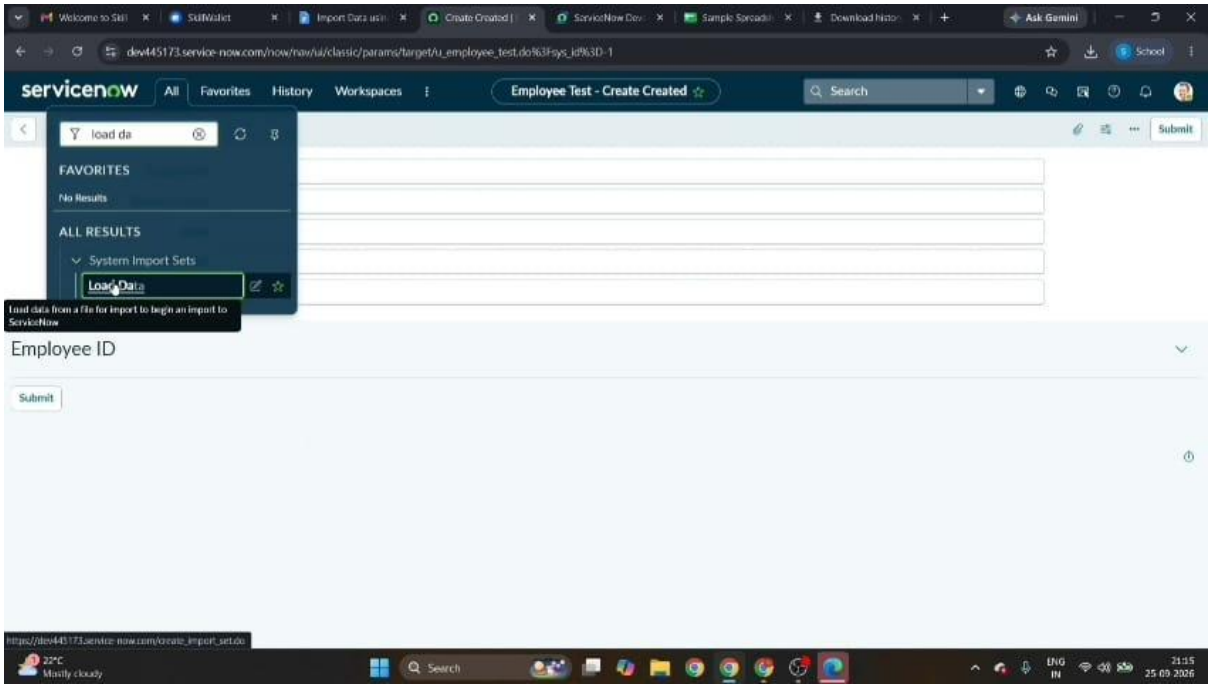

Click on Submit or Save.

Phase 3: Import Set Table

Navigation:

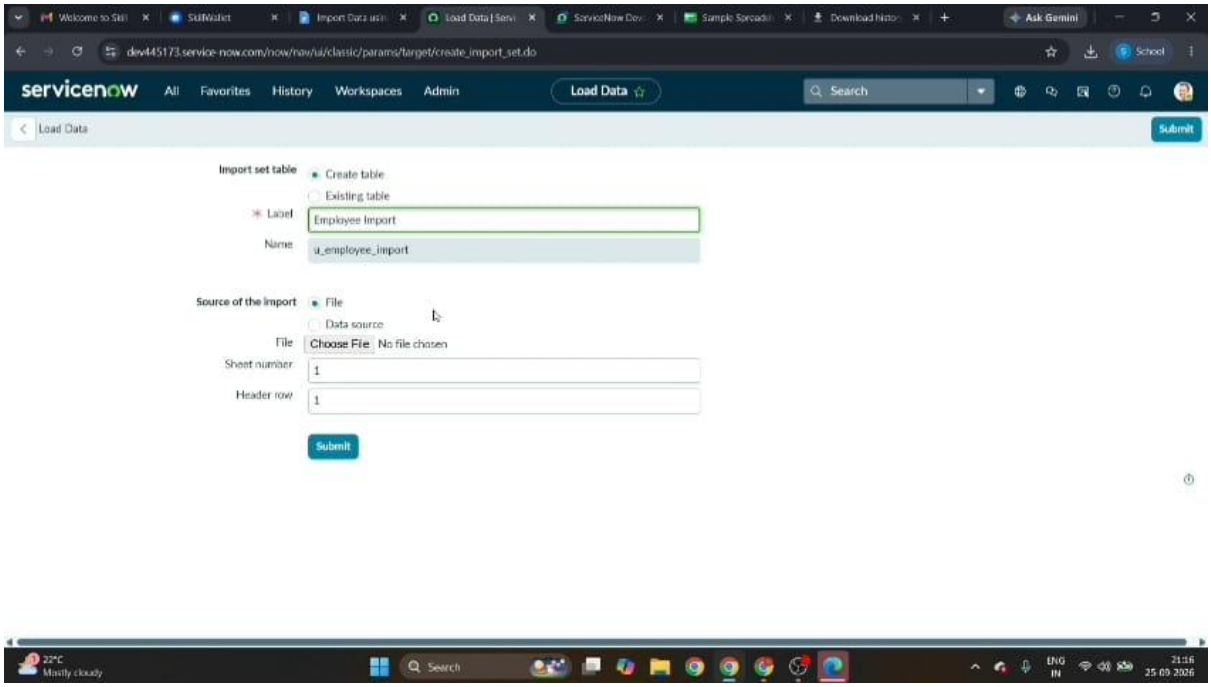

In Application Navigator → Load Data

Click on Load Data and create an import table

Fill details as shown below

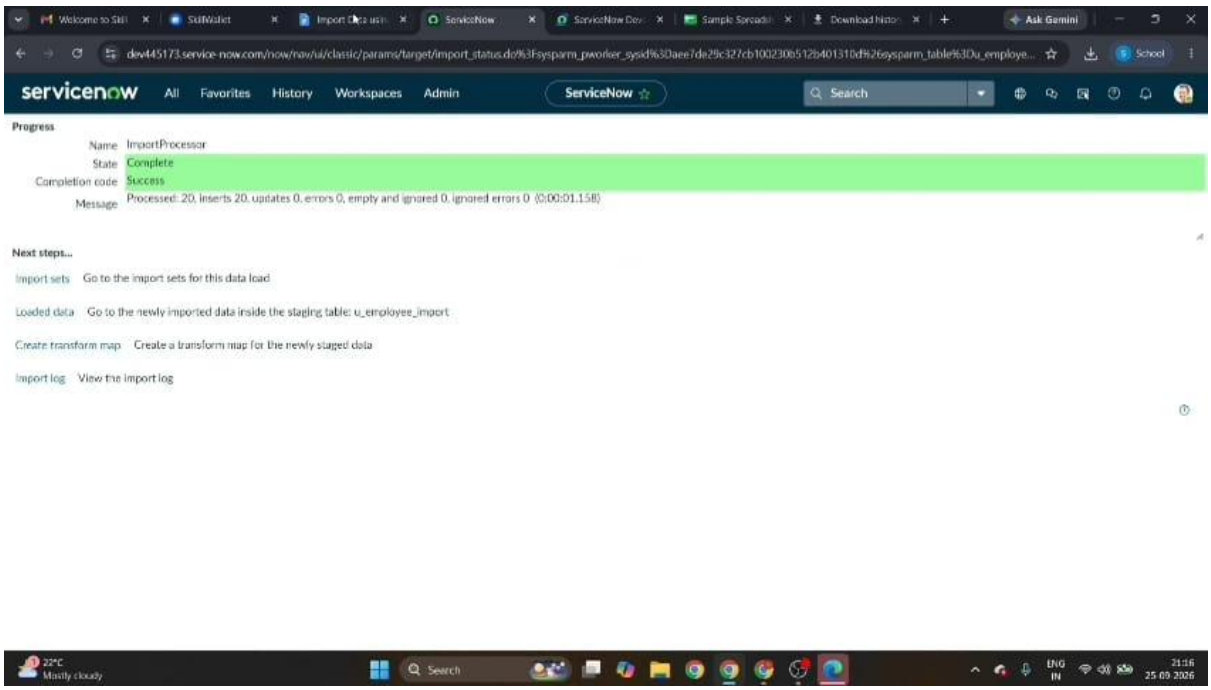

- Label: Employee Import
- Name: u_employee_import (auto populated)

- Click on Submit

Once we click on Submit, we can see the success message as shown below.

Also, we need to make sure to click on Create Transform Map.

Phase 4: Create Transform Map

In this phase we need to create the Transform Map by clicking on the Create Transform Map button as shown in above screenshot.

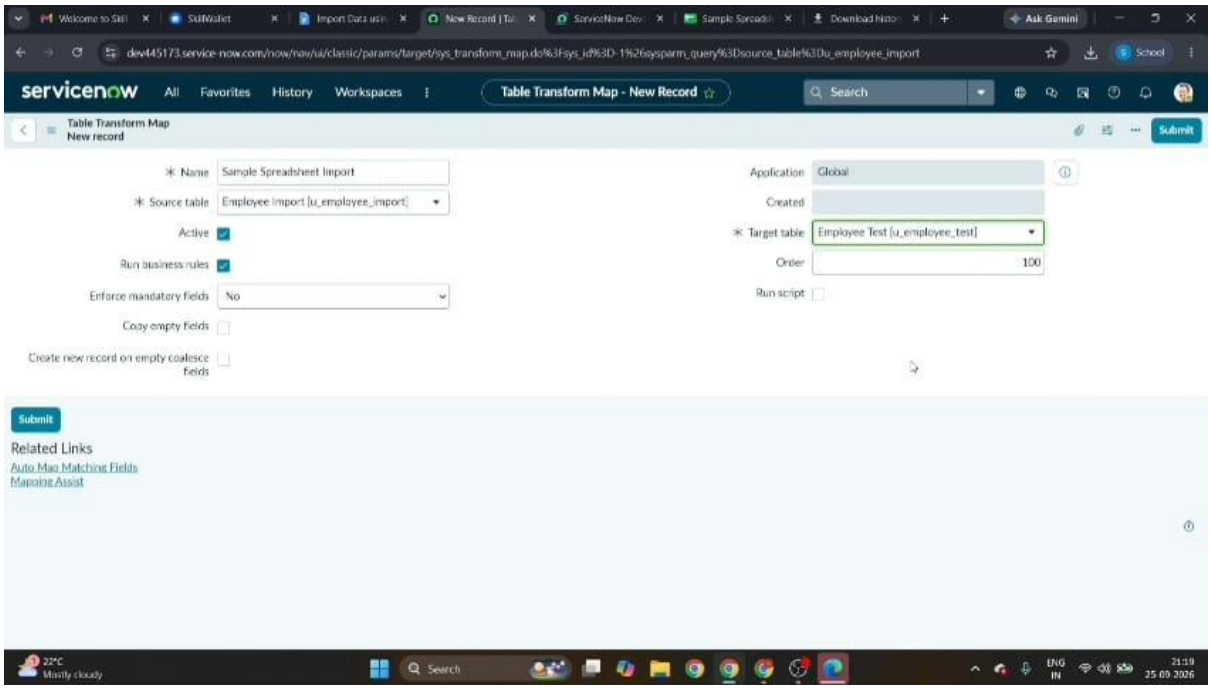

Give inputs as shown below.

Name: Sample Spreadsheet Import

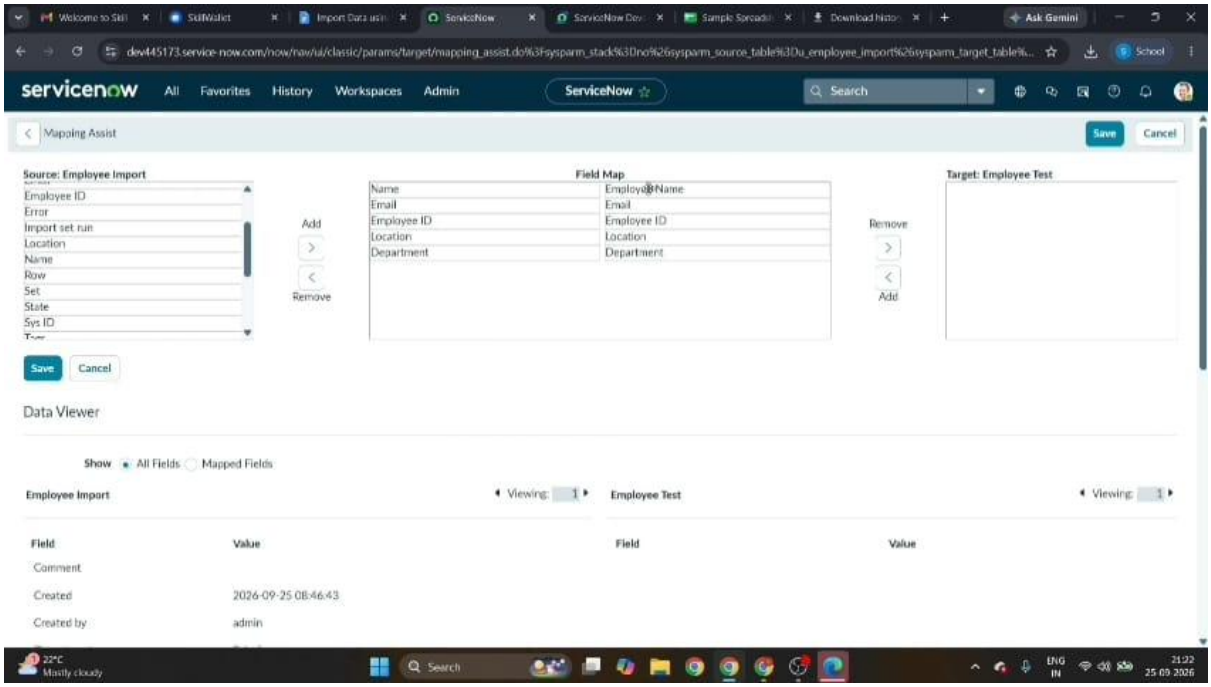

Source Table: Employee Import is auto-populated

Target Table: Employee Test - as we created earlier

Click on Auto Map Matching fields.

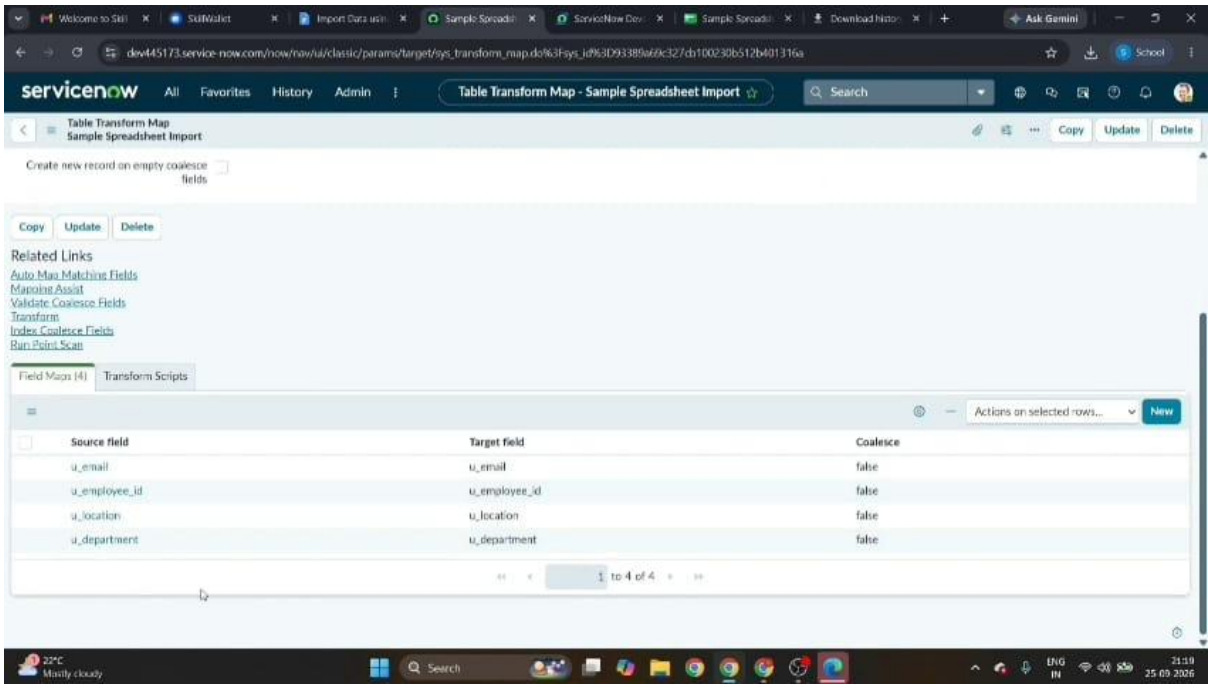

Now click on Mapping Assist and map the fields with Source & Target Table

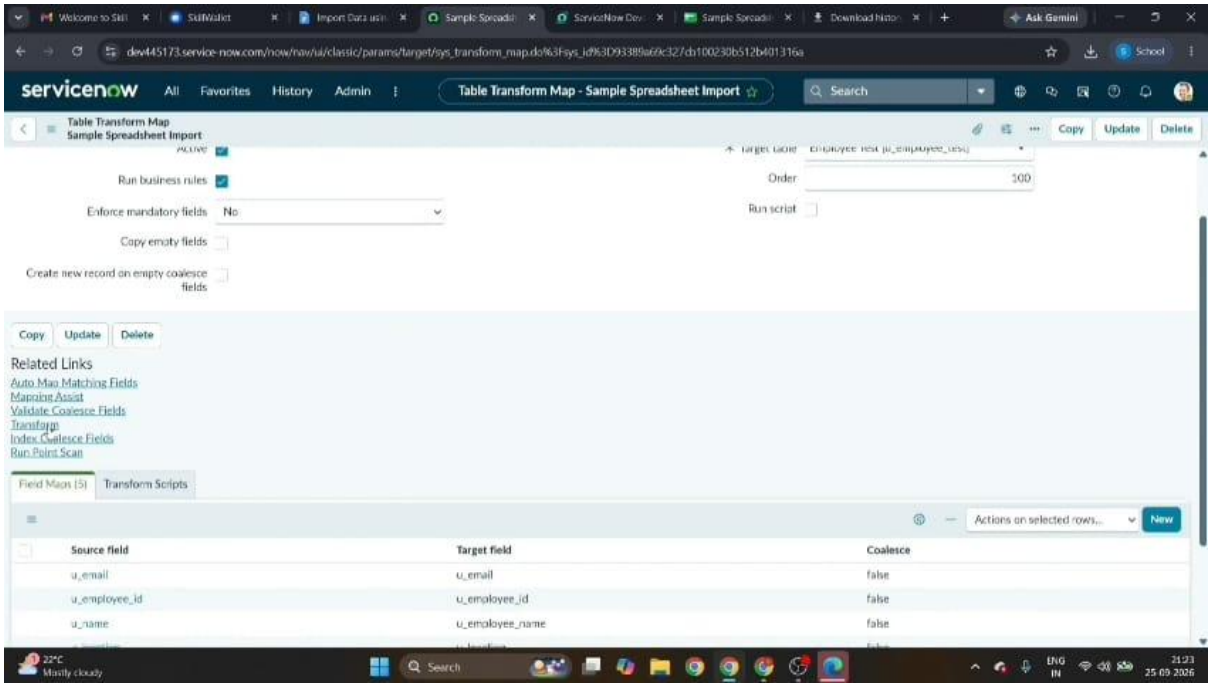

Click on Save

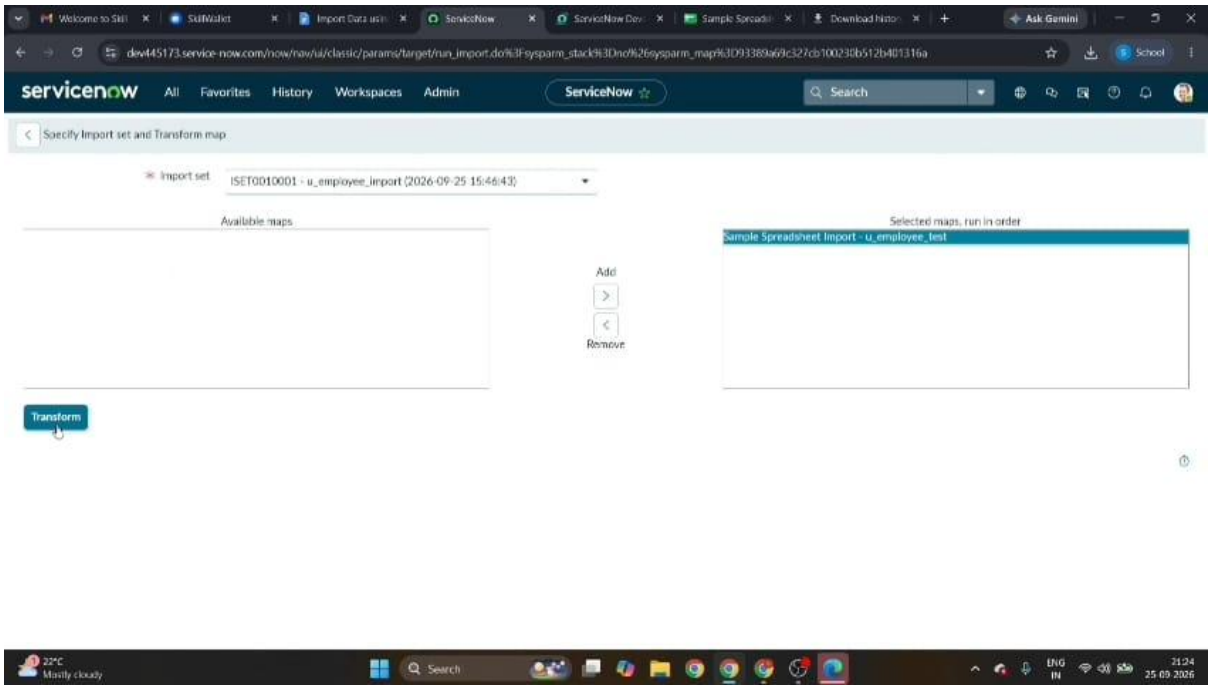

Make sure the both Source & Target table fields are mapped as shown below.

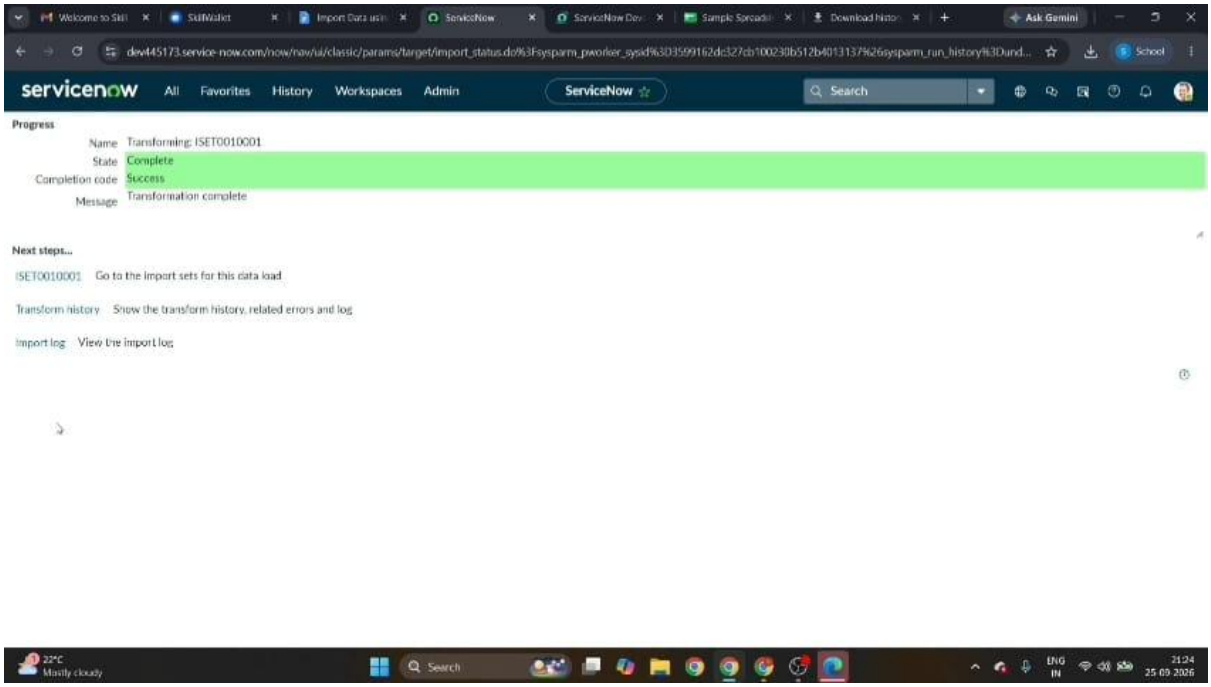

- Now click on Transform as shown below

- Now click on Transform Button as shown below.

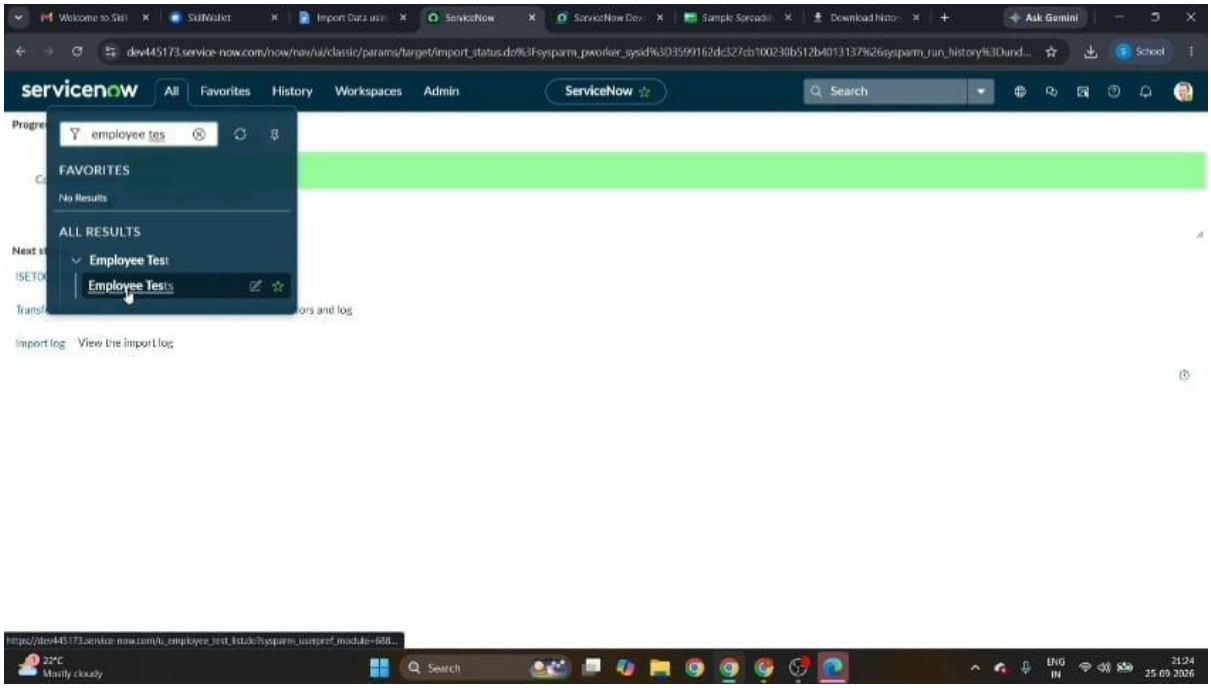

- After clicking Transform, make sure you see the success message as shown below.

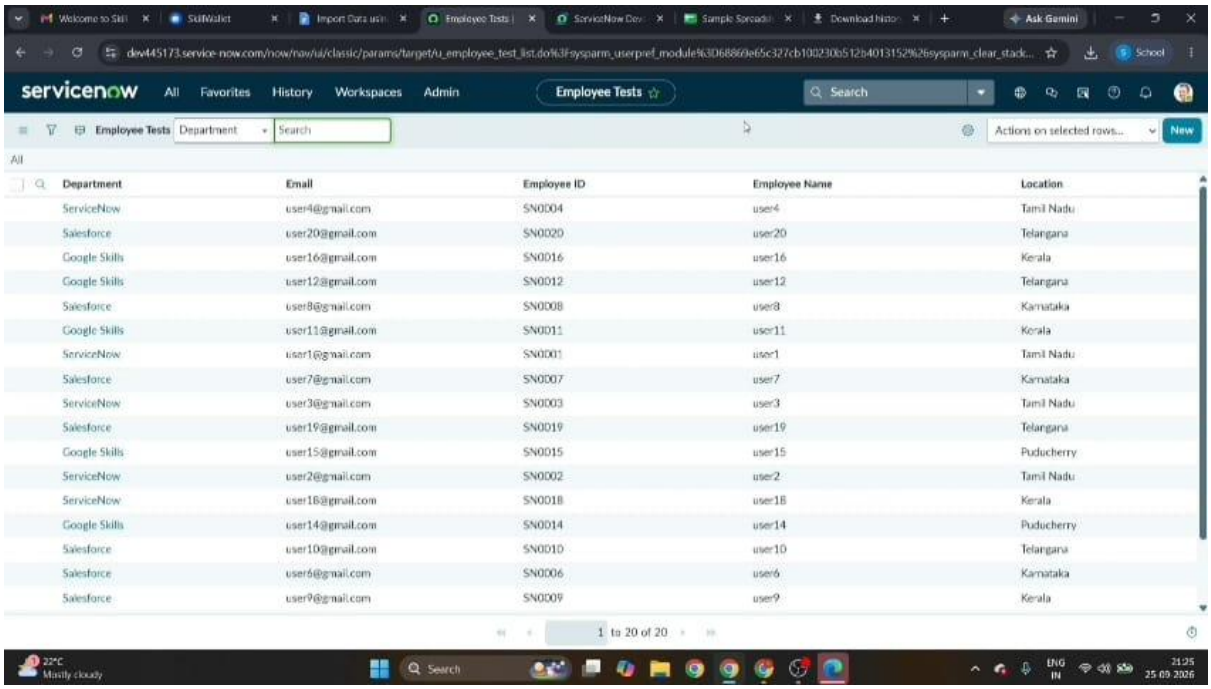

Phase 5: Transform Data & Validate

Navigation:

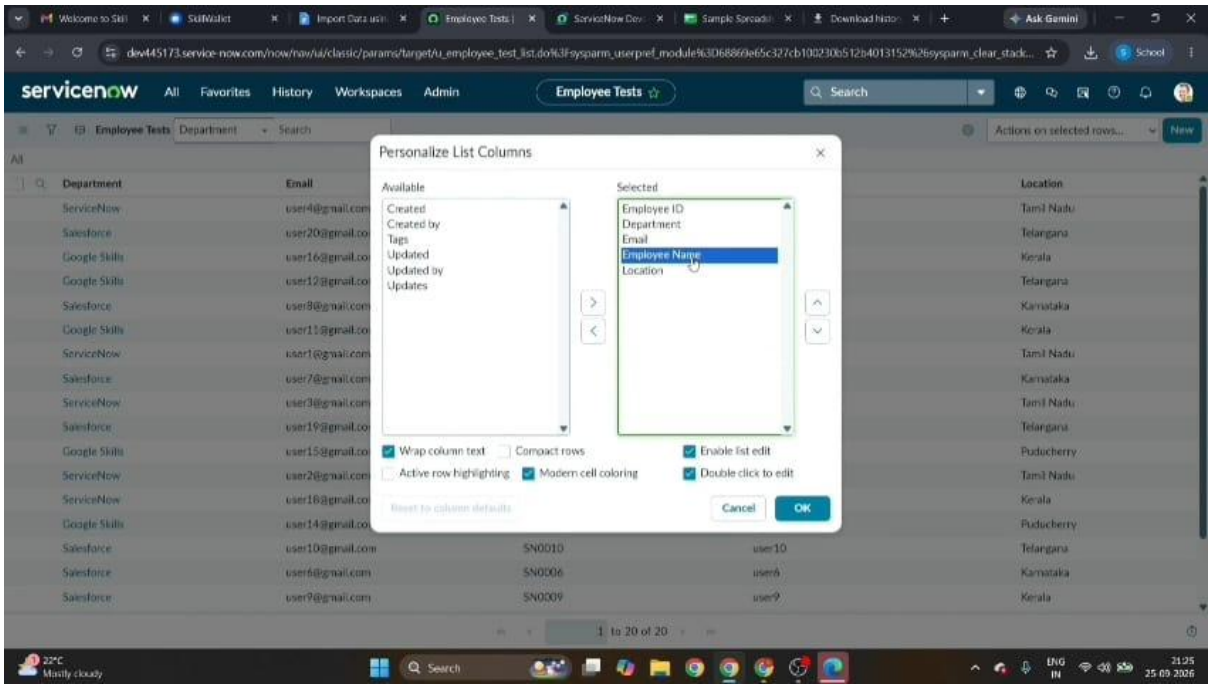

- Open Employee Test Table from application navigator as shown below.

- As our import got succeeded, all the records are created in the Employee Test Table.

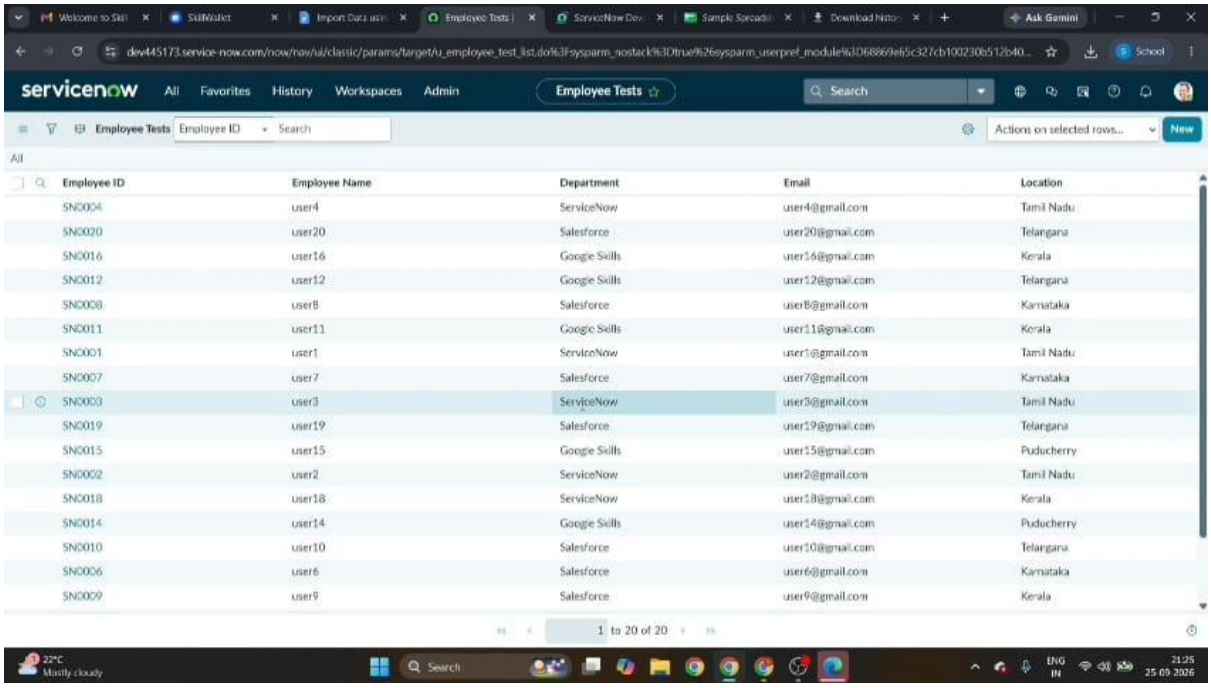

- Make sure you rearrange the fields accordingly by using Personalised List Columns

Click on OK

Final Result:

All the records are successfully imported into the ServiceNow system with Import Set, Transform Map.

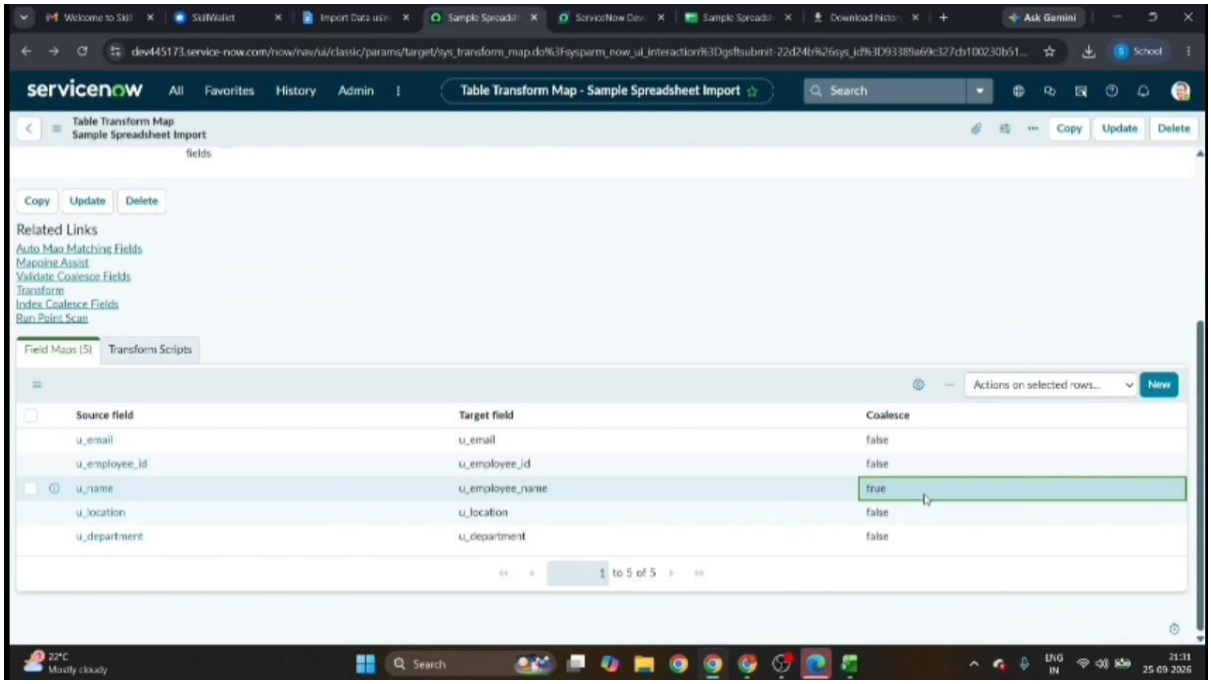

Phase 6: Enable Coalesce to Avoid Duplicate Records

- In real projects, the same employee data may be imported multiple times.
- To prevent duplicate employee records, we use **Coalesce**.
- The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

1. Open Transform map Under System LDAP On All menus.
2. Open the Created Transform map, Name is Sample Spreadsheet Import.

3. Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.
4. Now save the form.
5. Then again add some data which is in Excel format.

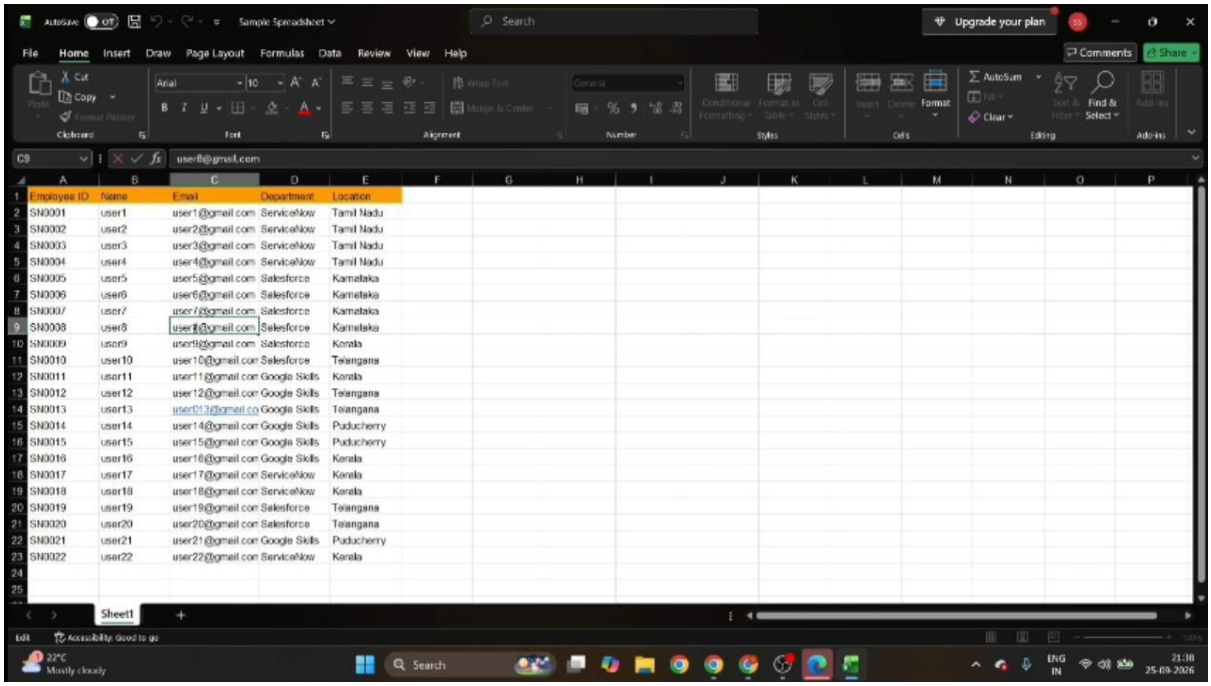

PHASE 7 : Inserting New Data In Excel Format

Steps :

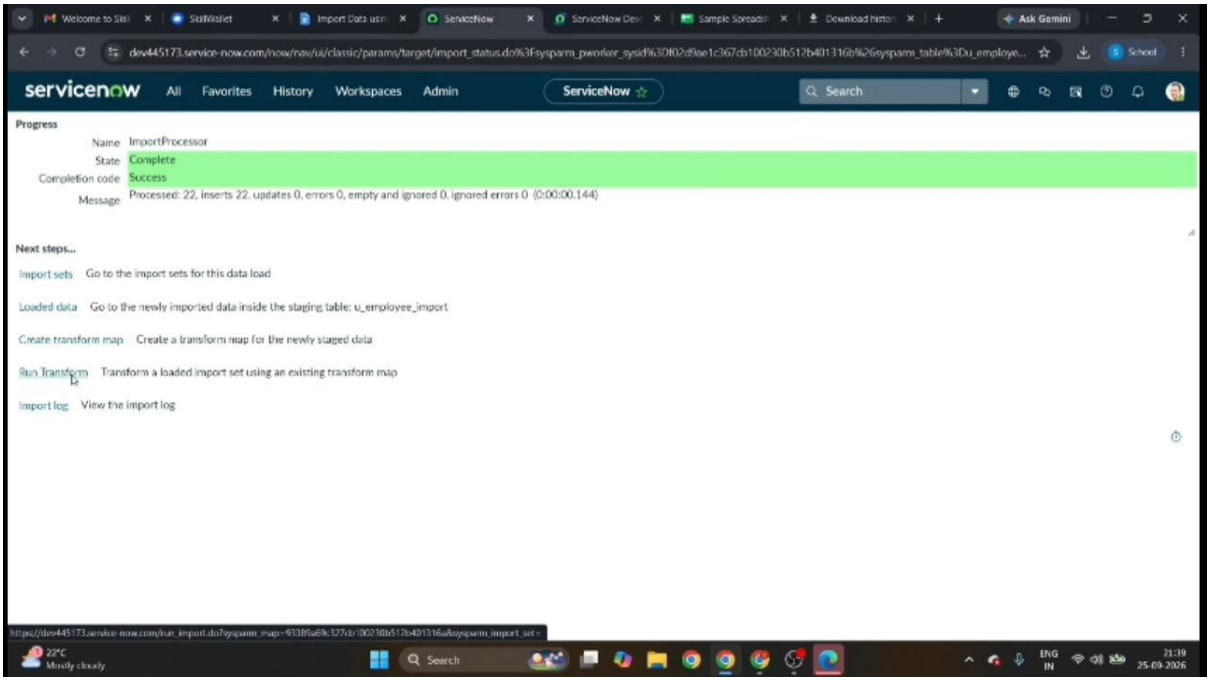

- Navigate to All menus.
- Search for Load data Under System Import set Open Load Data.
- Fill the details as
- Import set table as select Existing table {Employee Import}.
- Source of Import is Select File and choose the file from Files.
- Sheet number : 1, Header row : 1.
- Now Click submit.

- Newly Created Excel Data is this.

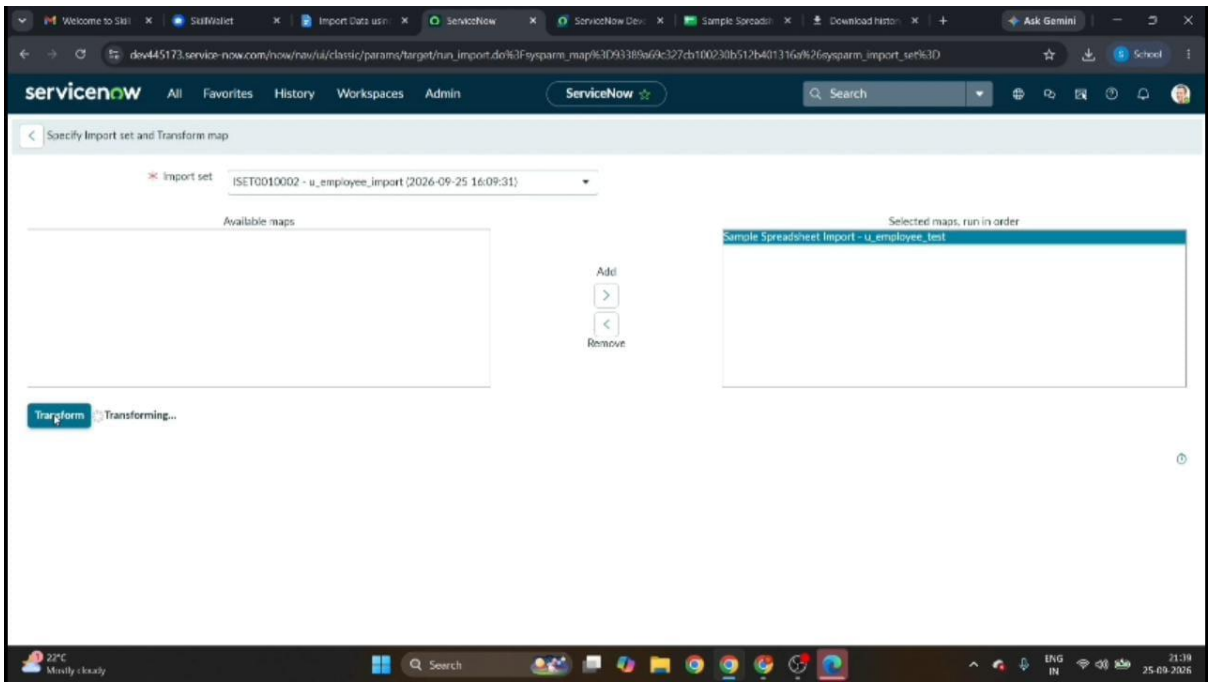

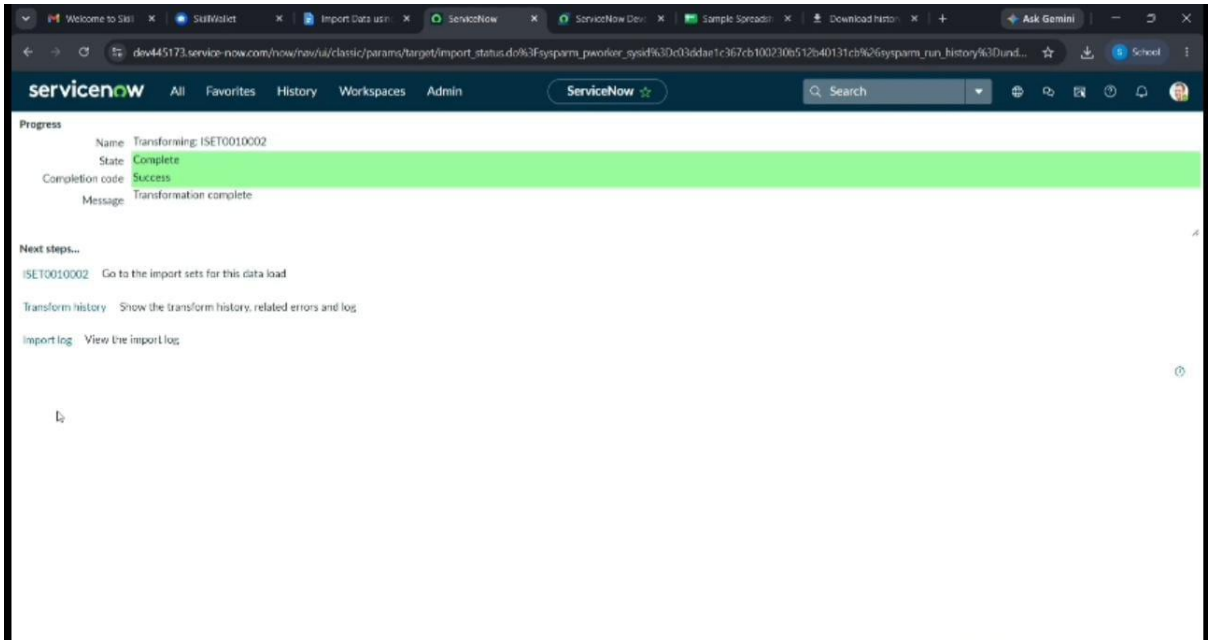

Employee ID	Name	Email	Department	Location
SN0001	user1	user1@gmail.com	ServiceNow	Tamil Nadu
SN0002	user2	user2@gmail.com	ServiceNow	Tamil Nadu
SN0003	user3	user3@gmail.com	ServiceNow	Tamil Nadu
SN0004	user4	user4@gmail.com	ServiceNow	Tamil Nadu
SN0005	user5	user5@gmail.com	Salesforce	Karnataka
SN0006	user6	user6@gmail.com	Salesforce	Karnataka
SN0007	user7	user7@gmail.com	Salesforce	Karnataka
SN0008	user8	user8@gmail.com	Salesforce	Karnataka
SN0009	user9	user9@gmail.com	Salesforce	Kerala
SN0010	user10	user10@gmail.com	Salesforce	Telangana
SN0011	user11	user11@gmail.com	Google Skills	Kerala
SN0012	user12	user12@gmail.com	Google Skills	Telangana
SN0013	user13	user013@gmail.co	Google Skills	Telangana
SN0014	user14	user14@gmail.com	Google Skills	Puducherry
SN0015	user15	user15@gmail.com	Google Skills	Puducherry
SN0016	user16	user16@gmail.com	Google Skills	Kerala
SN0017	user17	user17@gmail.com	ServiceNow	Kerala
SN0018	user18	user18@gmail.com	ServiceNow	Kerala
SN0019	user19	user19@gmail.com	Salesforce	Telangana
SN0020	user20	user20@gmail.com	Salesforce	Telangana
SN0021	user21	user21@gmail.com	Google Skills	Puducherry
SN0022	user22	user22@gmail.com	ServiceNow	Kerala

- It is the previously added data.
- Now, in this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.
- User13 and User8 Mail id was Changed to user13@gmail.com --> user013@gmail.com user8@gmail.com --> user08@gmail.com
- And two other new Employee ID's are added.
- Now after submitting the form, it appears as State Completed and Success.

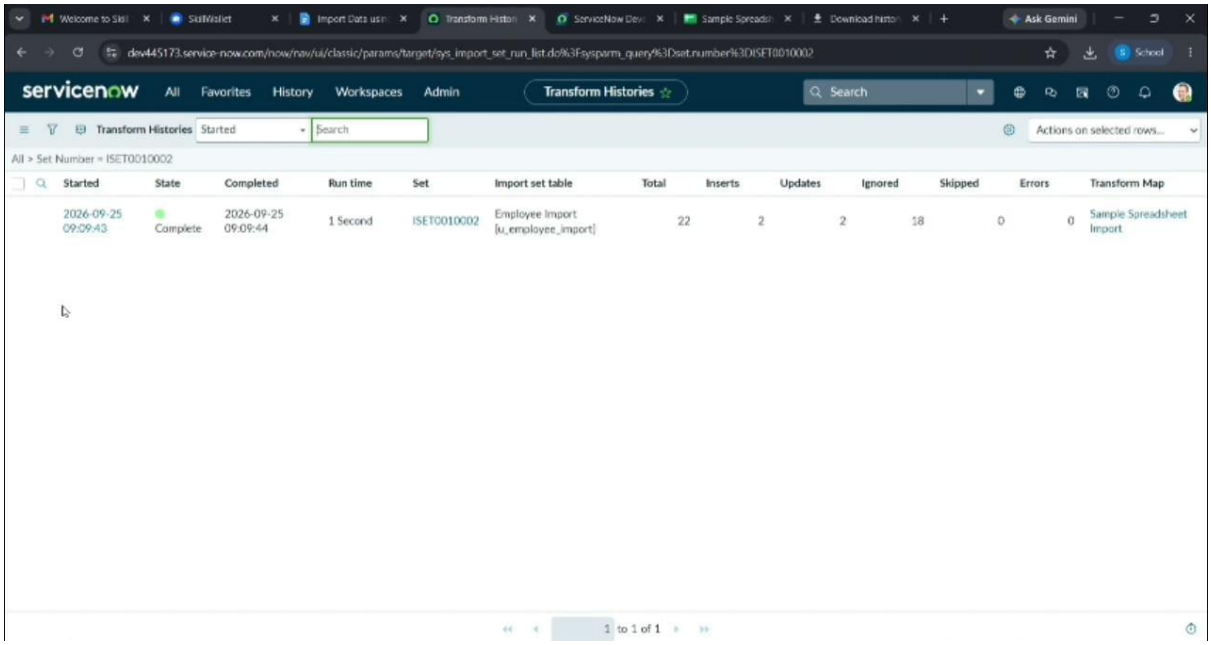

- Now Click the Run transform Under the next steps.
- Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

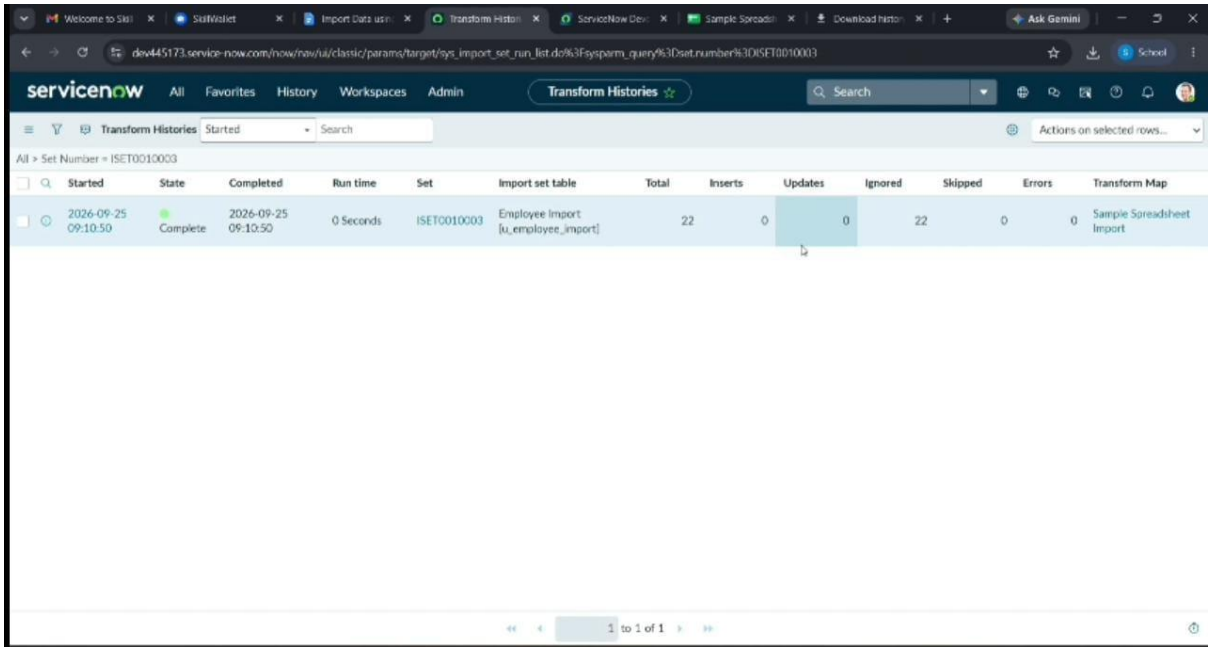

- Now the State is completed and Success.

- Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

- From the above figure: total 22 rows are uploaded out of 2 are Inserted that are two new ID's.
- And 2 rows are updates that are Same ID's with different Email that we changed.
- Then Open the Employee Tests table and see the rows updated and inserted.
- Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.
- Then Open the Transform history to check.

- In this, 0 rows are Inserted and 0 Updated and 22 Ignored rows.

CONCLUSION:

This project successfully demonstrated employee data import and management using ServiceNow Import Sets and Transform Maps. The data was prepared, imported, mapped, and transformed into the target table. Coalesce was used with Employee ID to identify existing records and avoid duplicate entries. The Transform History was also verified to check inserted, updated, and ignored records. Thus, the project provided a clear understanding of the complete data import and transformation process in ServiceNow.
